

Sales Analysis

Week 4 Project Report

Total Sales	Total Profit	Profit Margin
\$118.7M	\$16.9M	14.2%

This report presents the analysis completed in Power BI using the cleaned sales dataset. The main focus is on sales, profit, segments, products, countries, discounts and monthly sales.

1. Executive Summary

The dataset contains 700 records. Total sales are \$118.7M and total profit is \$16.9M. The overall profit margin is 14.2%.

The Government segment has the best result. It has \$52.5M in sales, \$11.4M in profit and a 21.7% margin. Enterprise needs attention because it has \$19.6M in sales but a loss of about \$615K.

The dashboard also shows that discounting and the timing of sales have an effect on the results. October is the strongest month, while the high-discount group has a much lower margin than the low-discount group.

2. Dataset Overview

Field	Details
Records	700
Years	2013 to 2014
Countries	Germany, Canada, France, Mexico, United States of America
Products	Carretera, Paseo, Velo, VTT, Amarilla, Montana
Segments	Government, Midmarket, Channel Partners, Enterprise, Small Business
Main measures	Sales, Profit, Units Sold, Discounts, COGS

The data has fields for date, country, product, segment, units sold, sales, costs, discounts and profit. These fields were used to prepare the Power BI visuals.

3. Data Cleaning & Preparation

The supplied workbook was used as the cleaned dataset. The fields were checked for the analysis and grouped into the dimensions needed for the dashboard. Sales, Profit and Units Sold were used for the main KPIs.

Profit Margin was checked using Profit divided by Sales. Month and Year fields were used to look at the sales trend over time.

4. KPI Overview

KPI	Result
Total Sales	\$118.7M
Total Profit	\$16.9M
Units Sold	1.13M
Overall Margin	14.2%

5. Key Findings

5.1 Segment Performance

Segment	Sales	Profit	Margin
Government	\$52.5M	\$11.4M	21.7%
Small Business	\$42.4M	\$4.1M	9.8%

Segment	Sales	Profit	Margin
Enterprise	\$19.6M	\$-0.6M	-3.1%
Midmarket	\$2.4M	\$0.7M	27.7%
Channel Partners	\$1.8M	\$1.3M	73.1%

Government is the strongest segment in the data. It accounts for \$52.5M in sales and \$11.4M in profit. Enterprise is the main weak area because its profit is negative.

5.2 Discount Impact

Discount Band	Sales	Profit	Margin
Low	\$34.6M	\$6.2M	17.9%
Medium	\$38.8M	\$5.6M	14.4%
High	\$37.4M	\$3.4M	9.1%

The Low discount band has a 17.9% margin, while the High band has a 9.1% margin. This is a reason to keep a close check on large discounts.

5.3 Seasonal Trend

October is the highest-sales month at \$21.7M. December is next at \$17.4M. Sales are also relatively strong in September and November. This suggests that planning for the later part of the year is important.

5.4 Product Performance

Product	Sales	Profit	Margin
Paseo	\$33.0M	\$4.8M	14.5%
VTT	\$20.5M	\$3.0M	14.8%
Velo	\$18.3M	\$2.3M	12.6%
Amarilla	\$17.7M	\$2.8M	15.9%
Montana	\$15.4M	\$2.1M	13.7%
Carretera	\$13.8M	\$1.8M	13.2%

Paseo has the highest sales at \$33.0M. Carretera has the lowest sales among the six products. Product decisions should consider both sales and profit rather than sales alone.

5.5 Country Performance

Country	Sales	Profit	Margin
United States of America	\$25.0M	\$3.0M	12.0%
Canada	\$24.9M	\$3.5M	14.2%
France	\$24.4M	\$3.8M	15.5%
Germany	\$23.5M	\$3.7M	15.7%
Mexico	\$20.9M	\$2.9M	13.9%

The United States has the highest sales at \$25.0M, with Canada close behind. Germany has the highest margin among the five countries. This shows that the country with the highest sales is not automatically the most profitable.

6. Business Recommendations

1. Review Enterprise deals. Check pricing, costs and discounts before approving large Enterprise orders.
2. Continue focusing on Government accounts because this segment is giving the strongest profit.
3. Keep high discounts under control. Discounts should be used where they bring enough extra sales to justify the reduction in margin.
4. Prepare stock and promotions before the stronger months, especially September to December.
5. Track profit margin along with sales when comparing products, countries and customer segments.

7. Conclusion

Overall, the business has \$118.7M in sales and \$16.9M in profit with a 14.2% margin. Government is the strongest part of the business, while Enterprise is the main area that needs improvement. The analysis also shows a clear need to manage discounts carefully and prepare for stronger sales periods.

8. Power BI Dashboard

The dashboard below was created in Power BI and contains the main KPIs and charts used for this analysis.

Dashboard includes Total Sales, Total Profit, Units Sold, Profit Margin %, Sales by Country, Sales by Product, Sales by Segment and Year filter.

9. Important Numbers

Item	Value
Total Sales	\$118.7M
Total Profit	\$16.9M
Overall Margin	14.2%
Government Sales	\$52.5M
Government Profit	\$11.4M
Government Margin	21.7%
Enterprise Sales	\$19.6M
Enterprise Profit	-\$615K
Enterprise Margin	-3.1%
Top Product	Paseo — \$33.0M
Top Month	October — \$21.7M
